

CEPREMAP / DBNOMICS

Macroeconomic Outlook – November 2023

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP, and will be updated every Thursday at 6:00pm
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are following in parallel headline inflation, financial market and labor market trends.
- In response to inflationary pressures, monetary policy has been tightened up to levels unheard of for the last 20 years. Both the Fed and the ECB have recently paused the hikes. However, the Fed signaled that a last 25-bps increase is probable for the last meeting of the year on December 13th.
- Headline inflation dropped below 3% in Europe in October although core inflation remains at high levels. In the US, headline inflation is plateauing above 3% and the return to the 2% inflation target may be complex as the Fed must deal with labor-market overheating and financial-market issues.
- GDP growth bet market expectation in the third quarter in the US. However, it was negative in the Euro Area as private consumption dropped. Notably, Germany growth remains low as its manufacturing sector is suffering.
- Most raw-material prices have come back to their pre-war levels. However, oil prices have surged again since June as Saudi Arabia and Russia have cut their supply.
- Sovereign yields are at a high level in the Euro Area as the uncertainty about inflation remains. However, the spreads between core countries and the periphery have been decreasing (except for Italy). Indeed, macroeconomic results have overcome expectations in countries as Spain or Greece while Germany's growth has been particularly low for the past year.
- After being lower than the USD, the EUR started appreciated in November 2022. However, high GDP growth and higher sovereign yields have led investors to favor the USD since the beginning of the summer, causing a new appreciation of the USD.

I Growth and inflation in selected G20 countries

A The growth slowdown

Growth in advanced economies

Growth was higher than expected in the US during the third quarter of 2023 while it was negative in the Euro Area. The OECD has moderately revised downward its growth projections for 2023 and 2024 for European countries, and upwards for the US.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %					
Country	2020	2021	2022	2023(P)	2024(P)

Quarterly GDP (base 100 in 2019-Q4)

Growth in emerging countries

Economic growth strongly decreased in the second quarter in China, readjusting to the previous high growth. The OECD has lifted 2023 and 2024 growth for Brazil and Mexico, but they have revised downwards the growth for the main emerging Asian countries.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %

Quarterly GDP (base 100 in 2019-Q4)

Government debts have reached a new plateau in the G4 countries¹

Inflation acted as a moderating factor on the evolution on debt ratios. Deficits decreased in France and Germany in the first two quarters of 2023 while they have been increasing in the UK and the US.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer confidence is on an upward path for the main European countries but remaining at rather low levels.

Business confidence, however, has been on a decreasing path for the last year.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

Russian invasion added inflationary pressure. Yet, prices of raw materials have mostly returned to their pre-war range.

Natural-gas-price difference between the US and Europe has decreased but a one to four discrepancy remains between the two markets. Wheat and copper prices are slowly decreasing, almost reaching their pre-COVID levels. However, oil prices have been increasing again since June as OPEC+ has cut production.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/tonne)

CBOT Wheat (USD/Bushel)

Supply chain disruptions are easing up significantly

Transportation costs have returned to their pre-crisis level.

% of EU business reporting shortages of materials and equipment in the construction industry as a limiting production factor

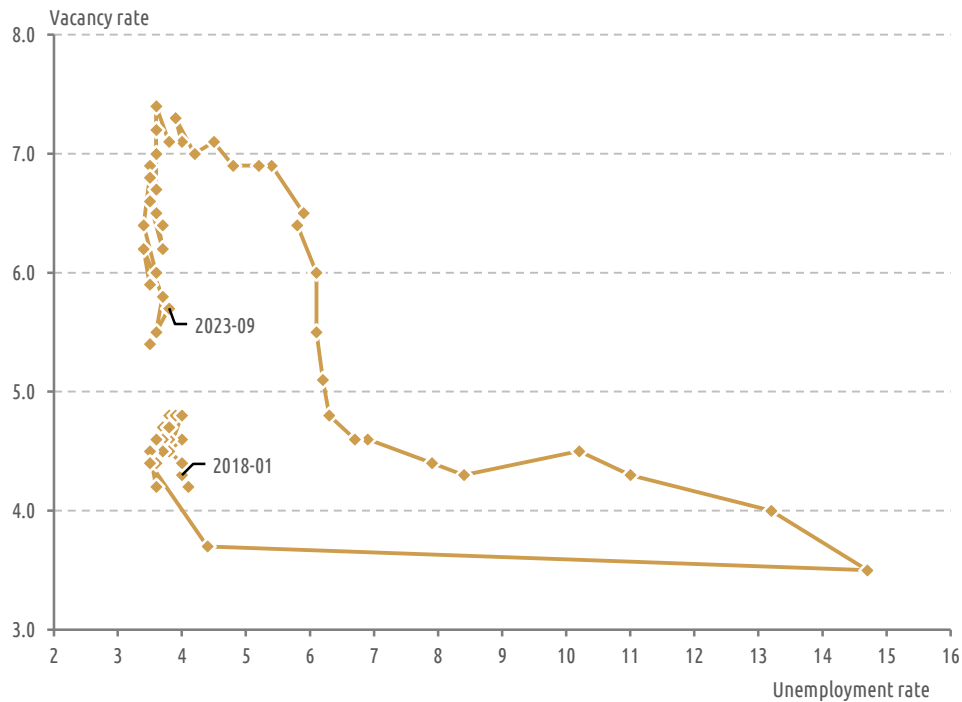

Shipping Container Index (based on spot rate for 40 feet containers)

Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remain at very low levels. In the US, after falling for a few months, the vacancy/unemployment ratio seems to be stabilizing above pre-covid levels.

Beveridge curve - USA, Monthly

The verdict on wage inflation in 2023, both in the US and the EZ, is still open

Although wage inflation is lower in the Euro Area, it may not have reached its peak yet, leaving open the question of the extend of monetary tightening.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

C Inflation unbound

Inflation is coming down from its peak both in Europe and the US

Headline inflation dropped in September in the Euro Area (but it is still above 4% for France). Inflation seems to be plateauing above 3% in the US. It remains very high in the UK. Core inflation remains at high levels for all countries.

CPI and core inflation in advanced economies (YoY % change)

UK	1.0	1.6	5.4	6.3	7.3	7.6	7.9	-

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

Monetary policy decisions from the Fed (1/2)

The Fed decided to maintain interest rates at their levels in November despite the plateauing of inflation and a stronger-than-expected economic growth.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	03-23	04-23	05-23	06-23	07-23	08-23	09-23
PCE inflation	4.4	4.4	4.0	3.2	3.4	3.4	3.4

PCE Inflation Projections as of September 2023 (%)

Key considerations

- The target range of the federal fund rates was maintained at 5.25%-5.50% on November 1st.
- The decision comes after a first pause in the hikes in September. Interest rates are at their highest levels since 2001.
- The Fed revised up GDP growth from 1% to 2.1%. The main concern is whether the labor market will cool down, decreasing pressures on prices.
- Next meeting will be on December 13th. The key issue is whether a new hike will occur.

Federal Reserve economic projections as of 20th September 2023

Indicator	2023	2024	2025	Longer run
Change in real GDP	2.1	1.5	1.8	1.8
Unemployment rate	3.8	4.1	4.1	4.0
Inflation	3.3	2.5	2.2	2.0
Federal funds rate	5.6	5.1	3.9	2.5

“Evidence of growth persistently above potential, or that tightness in the labor market is no longer easing, could put further progress on inflation at risk and could warrant further tightening of monetary policy.”

Monetary policy decisions from the Fed (2/2)

The Federal Reserve's so-called dot plot shows the median year-end projection for the federal fund rates. The estimates in September remain close to the previous ones in June. They imply another 25-pp hike at next meeting in December.

FOMC participants' assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 20th September

Nominal long-term rates are at their highest level since the Great Recession

Real rate however are expected to stay around 2% in real terms

10-Y Nominal yield – US

Inflation Expectations – US (%)

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve has been inverted for more than a year

It has, however, come close to zero in the last month

U.S. 10Yr/2Yr Spread – Since Jan. 1978

B In the Euro Area

The ECB decided to keep its interest rates unchanged in the November meeting

President Lagarde explained that considering the strong decrease of inflation in September, no new hike is required. The ECB is waiting to see the effects of current interest rate levels for reaching the 2% inflation target.

Inflation expectations & projections as of September 2023 (%)

Key considerations

- **The Governing Council decided to maintain the three key ECB interest rates at their September value. This pause comes after continuous increases for more than 18 months.**
- Looking ahead, ECB staff have slightly revised their inflation projections up in September. Headline inflation is now expected to average 5.6% in 2023 while core inflation should reach 5.1%.
- The benchmark deposit rate is now set at 4%, coming from minus 0.5% a year and a half ago. It is the highest level since 2000.
- **The next meeting is set on December 14th. The ECB hinted that the interest rate will probably remain unchanged.**

ECB economic projections as of 14 September 2023			
Indicator	2023	2024	2025
Change in real GDP	0.7	1.0	1.5
Unemployment rate	6.5	6.7	6.7
Inflation	5.6	3.2	2.1

“Our past interest rate increases continue to be transmitted forcefully into financing conditions. This is increasingly dampening demand and thereby helps push down inflation.”

CHRISTINE LAGARDE, MONTERAY POLICY DECISION, OCTOBER 26TH 2023

In the Eurozone, nominal rates keep increasing despite the decrease of inflation

Expected real rates, however, are near zero in the longer run.

10-Y Nominal yield – German Bund

Inflation Expectations¹ - Germany (%)

Forward Rates on 10-Year German Bund (%)

The German yield curve is inverted for the first time since 2008, reflecting risk of recession/sluggish growth

It is, however, coming closer to zero.

Bund 2Yr/10Yr Spread – Since Jan 1998

After an appreciation since the end of 2022, the Euro has been weakening for the last three months

Current and expected growth differentials are causing investors to favor the US Dollar.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 MAY 2022

III Impact on yields and spreads

In Europe, sovereign yields are at particularly high levels

Italian, Greek and French 10-Y yields – Since Jan. 2021

Sources: Eurostat as of 08/11/2023

Tensions on spreads have moderately eased off since their peak late 2022

However, Italy's spreads have been increasing over the last couple of months notably due to fears over larger-than-expected public deficits.

Italian, Greek and French spreads over 10Y German bund – Since Jan. 2021

High yield corporate bond spreads have slightly increased in the last couple of months both in the US and the Euro Area.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

IV Impact on stock markets

Stock-market prices remain below pre-war levels

They have been going down since July, notably over fears about persisting high inflation and continuous rise of government yields.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

Volatility on US financial markets has fallen below its historical average level

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators returned to pre-war levels

The index, however, is higher in Europe than in the US.

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

US Shiller Cyclically Adjusted Price to Earnings ratio (CAPE ratio)¹

Shiller CAPE ratio remains at record high level in historical perspective and back to its pre-crisis level.

Cyclically Adjusted Price Earnings ratio – Since 1900

Cyclically Adjusted Price Earnings ratio – Since 2020

Shiller CAPE ratio in Europe

Shiller CAPE ratio is still close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
