

CEPREMAP / DBNOMICS

Macroeconomic Outlook – June 2025

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP, and will be updated every Thursday at 6:00pm
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are scrutinizing President Trump's decisions as the resulting political and economic uncertainties drive financial market volatility, influence governments' decisions, and affect inflation, global demand and labor market trends.
- Since Trump's inauguration and with the onset of the tariff war, economic and financial indicators have weakened: the US dollar has depreciated, risk premiums have risen, and stock market indices have declined. With the start of tariff truce in May, some indicators as stock market indices have improved, but the uncertainty still hinders economic activity. US potential involvement in the current Middle-East situation is also closely followed by observers.
- Headline inflation is now at 1.9% in the Euro Area while it is at 2.4% in the US. Core inflation remains higher than headline inflation. With the fall of inflation, a loosening of monetary policy has been happening. The ECB decreased its rates eight times by 25bp in a year while the Fed cut its rates by 100bp since September.
- Most raw-material prices have come back to their pre-war levels. Natural-gas price difference between Europe and the US has decreased. Tensions in the Red sea led to a massive rise of transportation costs in 2024 while the threat of tariffs by US president-elect Trump has also maintained transportation costs at a high level in the last few months.
- GDP growth differences between the US and Europe remained strong in 2024. Because of the trade war, the OECD has significantly decreased its growth projections for all developed countries for 2025 (they expect a 1.0% growth for the Euro Area versus a 1.6% growth for the US).
- Sovereign yields remain at a high level in the Euro Area despite their decrease over the past year with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.

I Growth and inflation in selected G20 countries

A The growth slowdown

Forecasts of economic growth are falling

Growth was particularly high in the US in 2024. Tariff's uncertainty leads to a decrease of growth projections for 2025 and 2026 for all developed countries.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024	2025(P)	2026(P)

Sources: OECD, OECD Economic Outlook June 2025
Note: (1) Negative number

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa and Mexico have particularly low economic growth. The OECD forecasts decreased in June for most countries.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024	2025(P)	2026(P)

Indonesia	1.2	1.3	1.3	1.3	1.3	1.2	1.2	1.2	1.1

Quarterly GDP (base 100 in 2019-Q4)

Government debts are increasing in G4 countries¹

Inflation acted as a moderating factor on the evolution on debt ratios. With the fall of inflation, however, public debts are increasing again. Deficits are quite large: from 2.5% in Germany to 7.6% in the US, and do not seem to be decreasing.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

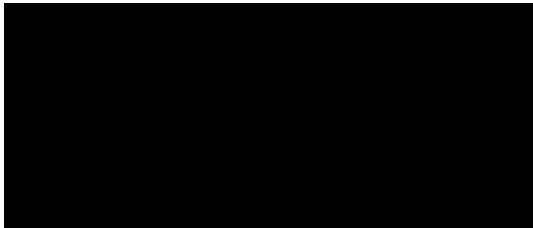

Over the last few months, consumer confidence has been going down especially for the US following tariff's uncertainty.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

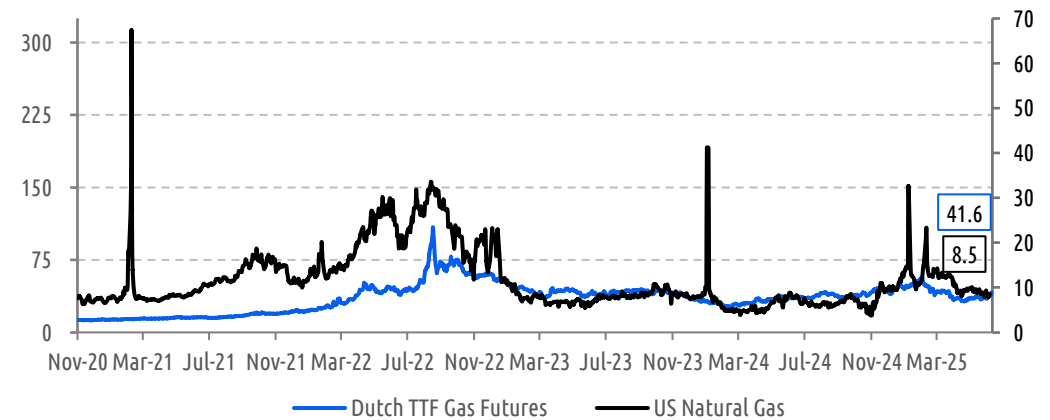

Prices of raw materials have mostly returned to their pre-war range

Natural-gas prices are at a one-to-four difference between the US and Europe. Wheat prices have strongly decreased since the Russian invasion to reach their pre-COVID level while copper prices remain high. Oil prices fell following Trump's tariffs.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

Supply-chain disruptions occurred in 2024

Transportation costs have increased for the last couple of weeks as firms have tried to take advantage of the trade truce between the US and China.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

Shipping Container Index (based on spot rate for 40 feet containers)

Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remains at very low levels. In the US, the vacancy/unemployment ratio fell to its pre-covid level. In the Euro Area, it has also been falling but it remains high.

Beveridge curve - USA, Monthly

Indicator of negotiated wages in the Euro Area (Quarterly)

— Euro Area - Labor cost index

— Euro Area - Indicator of negotiated wages

— France - Salaire mensuel de base (SMB)

C Inflation unbound

Headline Inflation is now close to the 2% target for most advanced economies

It slightly decreased since the beginning of the year in most countries (even dropped to 0.6 in France). Core inflation has been slowly decreasing but remains higher than 2% in most countries.

CPI and core inflation in advanced economies (YoY % change)

UK	8.2	7.8	7.0	4.7	4.1	3.1	4.0	4.8

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

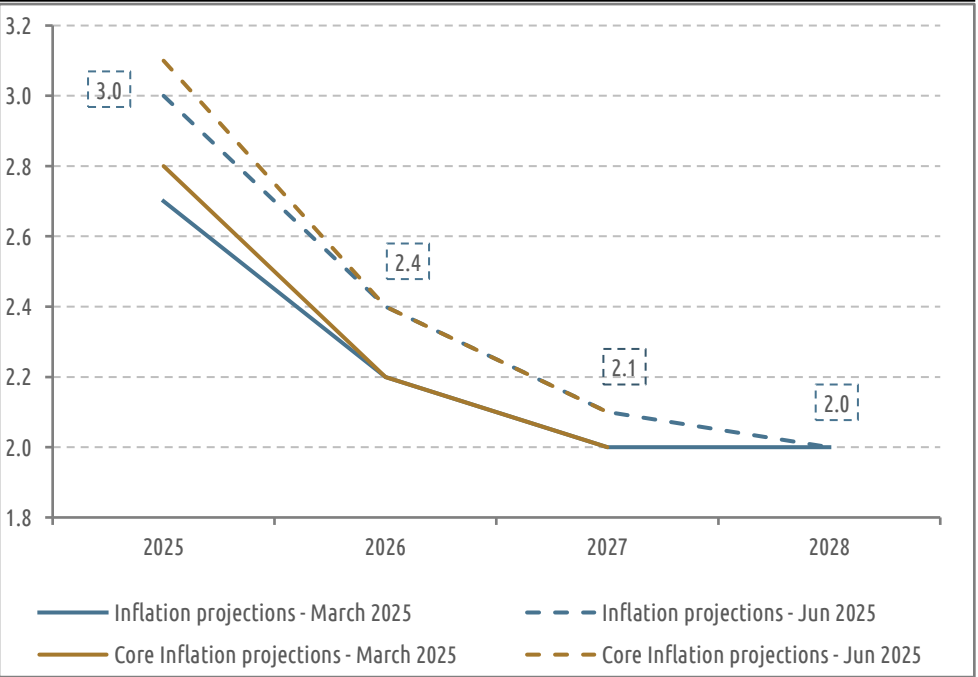

The Fed maintained its interest rate unchanged in June

Despite strong uncertainty, the Fed considers that economic activity and labor indicators are solid and well balanced. As such, they decided that their interest rates are at the proper level. However, their projections are less optimistic than in March or December.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	10-24	11-24	12-24	01-25	02-25	03-25	04-25
PCE inflation	2.3	2.4	2.6	2.6	2.7	2.3	2.1

PCE Inflation Projections as of June 2025 (%)

Key considerations

- The target range of the federal fund rates was maintained at 4.25%-4.50% on June 18th.
- The decision was expected by most investors. It follows several months without interest changes, and three cuts at the end of 2024. The rate was previously at its highest since 2001.
- In June, for the second consecutive times, economic projections have worsened. the Fed revised up inflation projections to 3.0% (from 2.5% in December and 2.7% in March) for 2025 while new GDP projections are considerably lower at 1.4 (versus 1.7% in March and 2.1% in December). Unemployment projections were revised up from 4.4% to 4.5%.
- Next meeting will be on July 30th. The question is whether a cut will occur.

Federal Reserve economic projections as of 18th June 2025

Indicator	2025	2026	2027
Change in real GDP	1.4	1.6	1.8
Unemployment rate	4.5	4.5	4.4
PCE Inflation	3.0	2.4	2.1
Federal funds rate	3.9	3.6	3.4

“We may find ourselves in the challenging scenario in which our dual-mandate goals are in tension. If that were to occur, we would consider how far the economy is from each goal, and the potentially different time horizons over which those respective gaps would be anticipated to close.”

Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In June, Fed members have forecasted interest rates similar to those of March. It notably implies that Fed members consider that only two 25-bps cut will occur in 2025.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 18th June

Nominal long-term rates are at high levels

Real rate however are expected to stay around 2% in real terms.

Federal funds interest rate

10-Y Nominal yield – US

Inflation Expectations – US (%)

Forward Rates on 10-Year U.S. Treasuries (%)

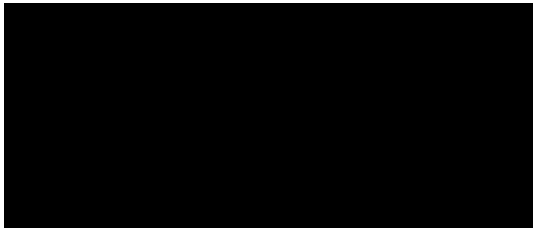

The US yield curve is positive for the first time in two years

This usually indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

B In the Euro Area

The ECB cut again its rates in June as uncertainty rises

President Lagarde explained that ECB actions over the last few months have brought inflation down and the ECB is confident that inflation will be around the 2% target in 2025. As such, they decided to lower their key rates to support economic growth that has been affected by downside surprises and uncertainty.

Key considerations

- **The target of the ECB rates was decreased to 2.00% on June 5th.**
- The Governing Council decided to cut by 25bp its three key ECB interest rates. This is the eighth 25bp cut since June 2024. Interest rates were previously at their highest level since the creation of the ECB.
- In March, The ECB staff decreased their headline inflation projections for 2025 and 2026, forecasting lower energy prices and a stronger euro. It is expected to average 2.0% in 2025 and 1.6% in 2026. They maintained their low GDP projections.
- **The next meeting is set on July 24th. The question is whether a new cut will occur.**

ECB economic projections as of June 5 th 2025			
Indicator	2025	2026	2027
Change in real GDP	0.9	1.1	1.3
Unemployment rate	6.3	6.3	6.0
Inflation	2.0	1.6	2.0

A strong labour market, rising real incomes, robust private sector balance sheets and easier financing conditions, in part because of our past interest rate cuts, should all help consumers and firms withstand the fallout from a volatile global environment.

In the Eurozone, nominal rates are decreasing but still at high levels

Expected real rates, however, are near zero in the longer run. ECB deposit rates decreased to 2.00% in June.

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve is positive, for the first time in almost two years

It has strongly increased over the last week, getting close to its long-term average, as investors flee US uncertainty.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated with the European elections, but it has been going up since Trump's inauguration

It is now at its highest since the end of 2021.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

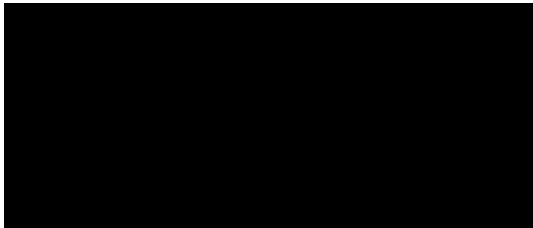

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

The yields are close for France and Greece. Yields jumped following the decision to increase defense spending in Europe. They have been slowly decreasing over the last couple of months.

Italian, Greek and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

For France, the spread increased after the results of the European and legislative elections and have not returned to the 50bp medium-term value.

Italian, Greek and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond spreads have been increasing, especially in the US, since Trump's inauguration

They have been decreasing since May with the tariff truce, but remain higher than their pre-inauguration levels.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads– Since 2022

IV Impact on stock markets

Stock market indices dropped following Trump's tariffs threats

Indices recovered their losses in May, following the trade truce, they are now back to their pre-inauguration level. The Eurostoxx fell this week due to potential escalations in the Middle-East.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index surged as economic uncertainty increases

It has decreased as most US tariffs were removed, however, it has increased over the last week following the events in the Middle East.

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators are at pre-war levels

They increased with US tariffs' uncertainty but are now back to very low levels.

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
