

CEPREMAP / DBNOMICS

Macroeconomic Outlook – October 2025

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP. The slides are updated each Friday
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are scrutinizing President Trump's decisions as the resulting political and economic uncertainties drive financial market volatility, influence governments' decisions, and affect inflation, global demand as well as labor market trends.
- Since Trump's inauguration and with the onset of the tariff war, most economic and financial indicators have weakened: the US dollar has depreciated and risk premiums have risen. With the start of tariff truce in May, some indicators as stock market indices have improved, but the uncertainty still hinders economic activity. US potential involvement in the current Middle-East situation is also closely followed by observers.
- Headline inflation is now at 2.2% in the Euro Area while it is at 2.9% in the US. Core inflation remains higher than headline inflation. With the fall of inflation, a loosening of monetary policy has been happening. The ECB decreased its rates eight times by 25bp while the Fed cut its rates by 100bp since June 2024.
- Most raw-material prices have come back to their pre-war levels. Natural-gas price difference between Europe and the US has decreased. Tensions in the Red sea led to a massive rise in transportation costs in 2024 while the threat of tariffs by US president-elect Trump has also maintained transportation costs at a high level in the last few months.
- GDP growth differences between the US and Europe remained strong in 2024. Because of the trade war and the economic uncertainty it is causing, the OECD has significantly decreased its growth projections for all developed countries for 2025 (they expect a 1.2% growth for the Euro Area versus a 1.8% growth for the US).
- Sovereign yields remain at a high level in the Euro Area despite their decrease over the past year with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.

I **Growth and inflation in selected G20 countries**

A The growth slowdown

Forecasts of economic growth fell

Growth was particularly high in the US in 2024. Tariff's uncertainty led to a decrease of growth projections for 2025 and 2026 for all developed countries.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024	2025(P)	2026(P)

Sources: OECD, OECD Economic Outlook October 2025
Note: (1) Negative number

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa and Mexico have particularly low economic growth. The OECD forecasts in September are slightly better for most countries for 2025 and 2026.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024	2025(P)	2026(P)
China	8.4	3.0	5.2	5.0	4.9	4.4

Indonesia	1.3	1.3	1.3	1.3	1.2	1.2	1.2	1.2	1.3

Quarterly GDP (base 100 in 2019-Q4)

Government debts are at high levels in G4 countries¹

With the fall of inflation public debts should increase again without a decrease of deficits. However, deficits remain quite large: from 2.3% in Germany to 6.9% in the US, and do not seem to be decreasing. The trend is particularly worrying for France.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

Over the last few months, consumer confidence has been at low levels, especially for the US, following tariff's uncertainty.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

Prices of raw materials have mostly returned to their pre-war range

Natural-gas prices are at almost a one-to-four difference between the US and Europe. Oil prices are on a downward trend. Wheat prices have strongly decreased since the Russian invasion to reach their pre-COVID level while copper prices remain high as supply has been lower than expected.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

Supply-chain disruptions occurred in 2024 and at the beginning of 2025

However, transportation costs have strongly decreased and are now below their long-time average.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

Shipping Container Index (based on spot rate for 40 feet containers)

Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remains at particularly low levels. In the US, the vacancy/unemployment ratio fell to its pre-covid level. In the Euro Area, it has also been falling but it remains high.

Beveridge curve - USA, Monthly

Unemployment rate (% of labor force) - Monthly

Civilian unemployment rate – Total – USA - Seasonally adjusted											
Indicator	09-24	10-24	11-24	12-24	01-25	02-25	03-25	04-25	05-25	06-25	08-25
Rate	4.1	4.1	4.2	4.1	4.0	4.1	4.2	4.2	4.2	4.1	4.3

Beveridge curve – Euro Area, Quarterly

Rate	3.4	3.4	3.4	3.5	3.5	3.6	3.6	3.7	3.7	3.7	3.7

Wage inflation has been on a downward trend

However, it remains at a high level, especially in the US.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

C Inflation unbound

Headline Inflation is now close to the 2% target for most advanced economies

It has been rather stable in last few months in the Euro Area. However, it has been increasing in the US and the UK, moving away from the 2% target. Core inflation has been slowly decreasing but remains higher than 2% in most countries.

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2024/2025											
Country	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep

UK	7.0	4.7	4.1	3.1	4.0	4.8	4.4	4.1

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

The Fed cut its interest rates by 25 bps in September

The Fed consider that a shift in the balance of risks occurred. They decided to cut rates to support economic activity as growth is moderated and the unemployment rate increased. They consider that the rise of inflation, mostly due to tariff hikes, should be short lived, without impact on the 2% medium-term target.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	02-25	03-25	04-25	05-25	06-25	07-25	08-25
PCE inflation	2.7	2.3	2.2	2.5	2.6	2.6	2.7

PCE Inflation Projections as of October 2025 (%)

Key considerations

- The target range of the federal fund rates was cut to 4.00%-4.25% on September 17th.
- The decision was expected by most investors. It follows several months without interest changes, and three cuts at the end of 2024. The rate was previously at its highest since 2001.
- Economic projections improved (but remain worse than at the beginning of the year). The Fed revised up GDP projections for 2025 at 1.6% (versus 1.4% in June) while maintaining inflation and unemployment projections to 3.0%.
- Next meeting will be on October 29th. New projections indicate that an interest cut is likely to occur.

Federal Reserve economic projections as of 17th October 2025

Indicator	2025	2026	2027
Change in real GDP	1.6	1.8	1.9
Unemployment rate	4.5	4.4	4.3
PCE Inflation	3.0	2.6	2.1
Federal funds rate	3.6	3.4	3.1

“When our goals are in tension like this, our framework calls for us to balance both sides of our dual mandate. With downside risks to employment having increased, the balance of risks has shifted.”

Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In September, Fed members have forecasted interest rates lower than in March. It notably implies that Fed members consider that two more 25bps cuts will occur in 2025.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 17th September

Nominal long-term rates are at high levels, slowly decreasing

Real rate however are expected to stay around 2% in real terms.

Federal funds interest rate

10-Y Nominal yield – US

Inflation Expectations – US (%)

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve is positive for the first time in two years

This usually indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

B In the Euro Area

The ECB kept its rates unchanged at 2% in September

President Lagarde explained that ECB actions over the last few months have brought inflation down and they are confident that inflation will be around the 2% target in 2025. They consider that despite global uncertainty, the European economy has proven resilient and that the key interest rates are at their appropriate levels.

- Key considerations**
- **The target of the ECB rates was maintained at 2.00% on September 11th.**
 - The Governing Council decision comes after eight 25bp cuts since June 2024. Interest rates were previously at their highest level since the creation of the ECB.
 - The ECB staff slightly increased their headline inflation projections for 2025 and 2026. It is expected to average 2.1% in 2025 and 1.7% in 2026. They particularly increased their GDP projections for 2025 (from 0.8 to 1.0%).
 - **The next meeting is set on October 30th. The question is whether a new cut will occur.**

ECB economic projections as of September 11 th 2025			
Indicator	2025	2026	2027
Change in real GDP	1.2	1.0	1.3
Unemployment rate	6.4	6.3	6.1
Inflation	2.1	1.7	1.9

“The domestic economy is showing resilience, the labour market is solid, and risks are more balanced.”

CHRISTINE LAGARDE, ECB PRESS CONFERENCE, SEPTEMBER 11TH 2025

In the Eurozone, nominal rates have been slowly increasing in the last few months

Expected real rates, however, are near zero in the longer run. ECB deposit rates decreased to 2.00% in June.

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve is positive, for the first time in almost two years

It has strongly increased, getting close to its long-term average, as investors flee US uncertainty.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated following the results of the European elections, but it has been going up since Trump's inauguration

The Euro is at its four-year high.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

— USD/EUR

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

— USD/EUR

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

French yield on public debt is now higher than the one for Spain and Greece.

Italian, Greek, Spanish and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

For France, the spread increased after the results of the European and legislative elections and has not returned to the 50bp medium-term value.

Italian, Greek, Spanish and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond have been decreasing since April

They are back to their pre-inauguration levels as economic uncertainty has been decreasing.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads– Since 2022

IV Impact on stock markets

US Stock market indices are at their highest levels ever.

Indices dropped following Trump's tariffs threats but they more than recovered their losses since May.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index surged as economic uncertainty increased

It has however decreased as tariffs uncertainty fell, and it is now below its long-term average.

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators are at pre-war levels

They increased with US tariffs' uncertainty but are now back to very low levels.

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
