Macroeconomic Outlook – March 2026

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP. The slides are updated each Friday
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

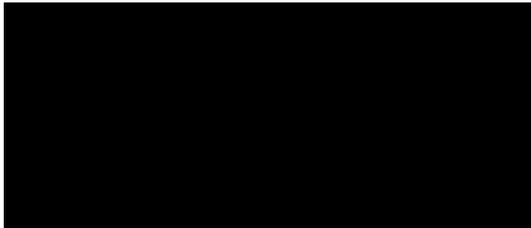

- Markets and policymakers are scrutinizing President Trump's decisions as the resulting political and economic uncertainties drive financial market volatility, influence governments' decisions, and affect inflation, global demand as well as labor market trends.
- Since Trump's inauguration and with the onset of the tariff war, some economic and financial indicators have weakened: the US dollar has depreciated and risk premiums have risen. With the (limited) tariff truce, other indicators as stock market indices have improved, but the uncertainty still hinders economic activity.
- The current Middle-East situation is closely followed by observers as it notably led to a surge of raw-material and transportation prices and may influence negatively more macroeconomic and financial indicators if the situation does not improve rapidly.
- Headline inflation is now at 1.9% in the Euro Area while it is at 2.4% in the US. Core inflation remains higher than headline inflation. Since 2024, a loosening of monetary policy has been happening. The ECB decreased its rates eight times by 25bp while the Fed cut its rates by 175 bp in total.
- GDP growth differences between the US and Europe remain large. However, because of the trade war and the economic uncertainty it is causing, the OECD's growth projections for 2026 are lower than a year ago for all developed countries (they expect a 1.2% growth for the Euro Area versus a 1.7% growth for the US in 2026).
- Sovereign yields remain at a high level in the Euro Area despite their slow decrease over the past couple of years with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.

I Growth and inflation in selected G20 countries

A The growth slowdown

Forecasts of economic growth fell

The OECD revised upwards its growth projections in December as tariffs and geopolitical uncertainties fell.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2022	2023	2024	2025(P)	2026(P)	2027(P)

Japan	(0.9)	(0.0)	(0.5)	0.4	0.4	0.7	0.2	0.6	(0.4)	0.0

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa and Mexico have particularly low economic growth. The OECD forecasts in December are slightly better for most countries for 2025 and 2026.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2022	2023	2024	2025(P)	2026(P)	2027(P)

Indonesia	1.3	1.3	1.2	1.2	1.2	1.2	1.3	1.3	1.3

Quarterly GDP (base 100 in 2019-Q4)

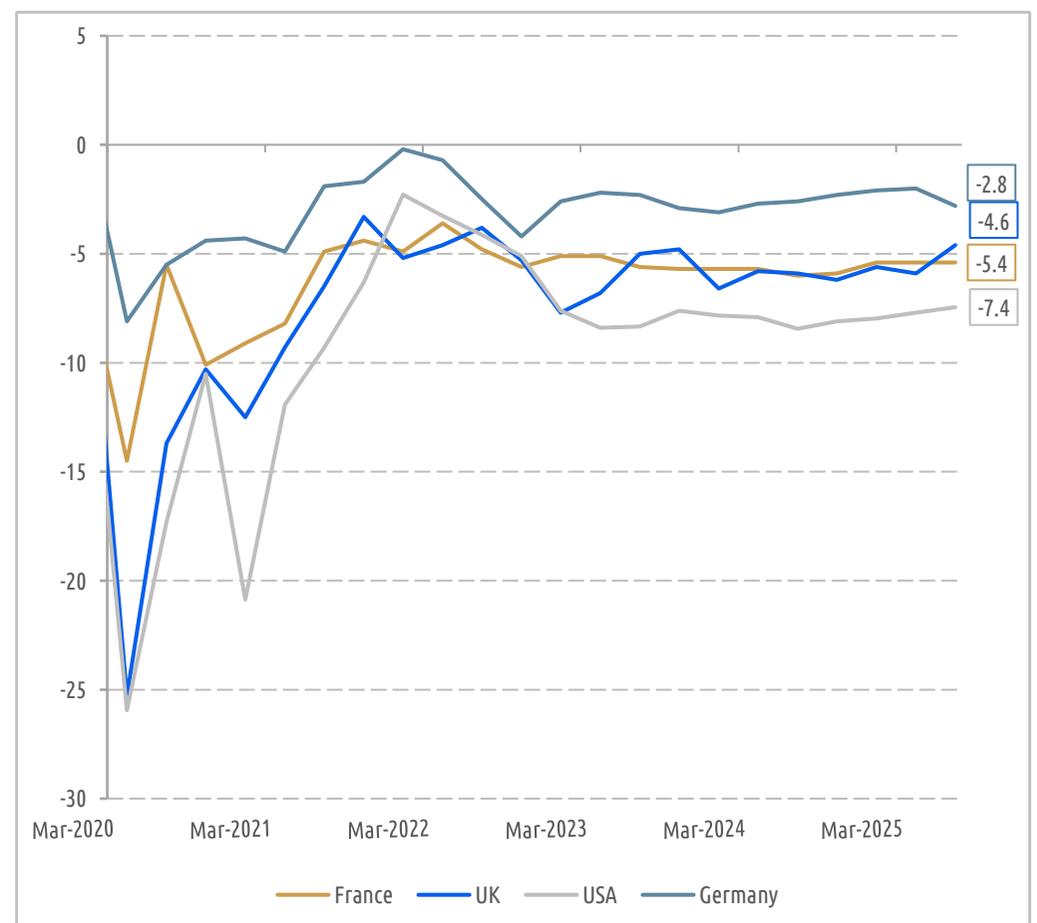

Government debts are at high levels in G4 countries¹

With the fall of inflation governments need to decrease primary deficits to stabilize public debts. However, deficits remain quite large: from 2.8% in Germany to 7.4% in the US, and do not seem to be decreasing.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

Over the last few months, consumer confidence has been at low levels, especially for the US (following tariff uncertainty) and France (due to political uncertainty). However, business confidence in France is quite high.

Consumer confidence indicator – Since Jan. 2020

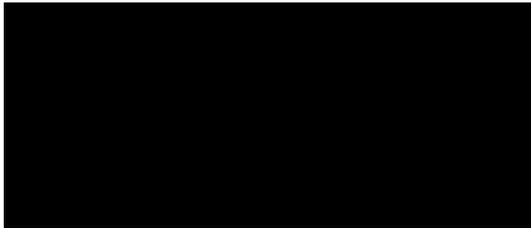

— USA — Germany — France — UK

Business confidence indicator – Since Jan. 2020

— USA — Germany — France — UK

B The seeds of inflation

Prices of raw materials have mostly returned to their pre-war range

Natural-gas price surged in the US following the winter storm but rapidly came back to a more usual level. Oil prices have been on a downward trend, but they spiked following the closing of the Strait of Hormuz. Wheat prices have strongly decreased since the beginning of the Russian invasion to reach their pre-COVID level while copper prices are particularly high as supply has been lower than expected.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

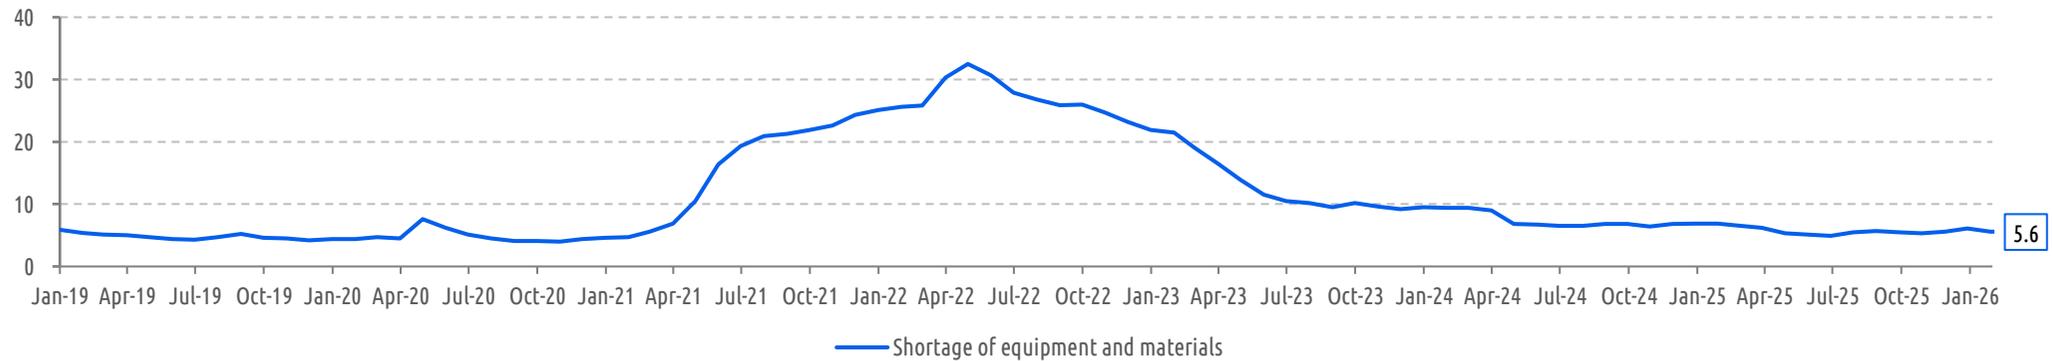

CBOT Wheat (USD/Bushel)

Supply-chain disruptions occurred in 2024 and at the beginning of 2025

However, transportation costs have strongly decreased and are now around their long-time average. Current Middle-East events, with notably the blockade of the Strait of Hormuz, are likely to raise price in the following weeks.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

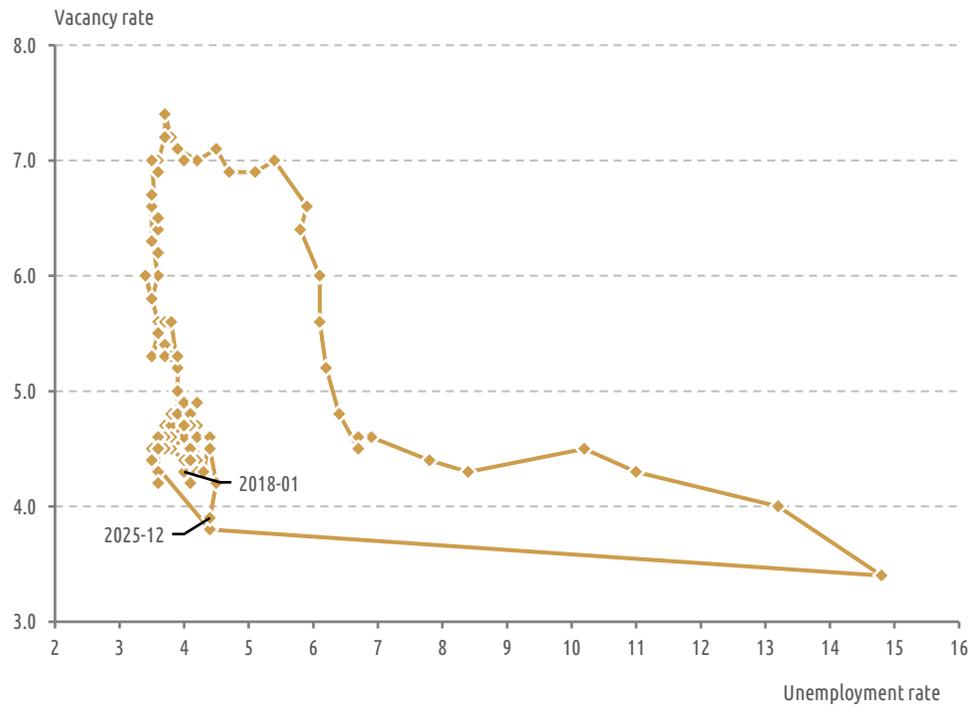

Shipping Container Index (based on spot rate for 40 feet containers)

Both vacancies and unemployment rates are at particularly low level

In the US, the vacancy rate is at its lowest level of the last decade (except for the beginning of the Covid period).

Wage inflation has been on a downward trend

However, it remains at a high level in the US.

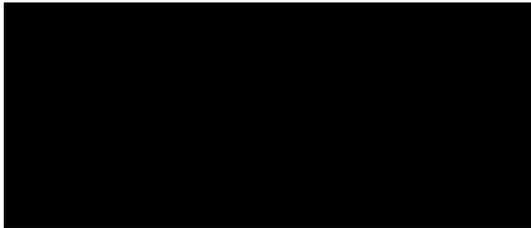

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

— Euro Area - Labor cost index — Euro Area - Indicator of negotiated wages
 — France - Salaire mensuel de base (SMB)

C Inflation stabilization

Headline Inflation is now close to the 2% target for most advanced economies

It has been rather stable in last few months in the Euro Area. However, it remains above the 2% target for the US and the UK. It is particularly low for France. Core inflation has been slowly decreasing but remains higher than 2% in most countries.

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2025/2026											
Country	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb

UK	3.7	3.2	3.9	4.9	4.2	4.1	3.5	3.1

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

The Fed maintained its interest rates in January

The Fed consider that the US economy grew at a solid pace in 2025 while the labor market has been stabilizing notably thanks to their previous rate cuts. Besides, they consider that the current high level of inflation is mostly due to tariff hikes, and should not impact the 2% medium-term target.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	03-25	04-25	05-25	06-25	07-25	08-25	09-25
PCE inflation	2.3	2.2	2.5	2.6	2.6	2.7	2.8

PCE Inflation Projections as of December 2025 (%)

Key considerations

- **The target range of the federal fund rates was maintained at 3.50%-3.75% on January 28th.**
- The decision was expected by most investors. It follows three cuts in September, October and December after several months without interest changes. In 2024 the rate was at its highest since 2001.
- Economic projections improved in December. The Fed revised up GDP projections for 2025 and 2026 at 1.7% and 2.3% (versus 1.6% and 1.8% in September) while slightly decreasing inflation projections from 3.0% to 2.9%.
- **Next meeting will be on March 18th. The question is whether a new cut will occur.**

Federal Reserve economic projections as of December 10th 2025

Indicator	2025	2026	2027
Change in real GDP	1.7	2.3	2.0
Unemployment rate	4.5	4.4	4.2
PCE Inflation	2.9	2.4	2.1
Federal funds rate	3.6	3.4	3.1

“Since last September, we have lowered our policy rate 75 basis points, or 3/4 of a percentage point, bringing it within a range of plausible estimates of neutral. This normalization of our policy stance should help stabilize the labor market while allowing inflation to resume its downward trend toward 2 percent once the effects of tariff increases have passed through.”

Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In December, Fed members have forecasted interest rates similar to those in September. It notably implies that Fed members consider that two 25bps cuts are likely to occur in 2026.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 10th December

Nominal long-term rates are at high levels, slowly decreasing

Real rate however are expected to stay around 2% in real terms.

Federal funds interest rate

Inflation Expectations – US (%)

10-Y Nominal yield – US

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve has been positive for the past year

This usually indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

B In the Euro Area

The ECB kept its rates unchanged at 2% in February

President Lagarde explained that ECB actions over the last few months have brought inflation down and they are confident that inflation will remain around the 2% target in 2026. However, they are waiting to see the consequences of the volatile environment (in terms of tariffs, exchange rates, financial markets, etc.).

Inflation expectations & projections as of December 18th 2025 (%)

Key considerations

- **The target of the ECB rates was maintained at 2.00% on February 5th.**
- The Governing Council decision comes after eight 25bp cuts since June 2024. Interest rates were previously at their highest level since the creation of the ECB.
- In December, the ECB staff increased their GDP projections for 2025 and 2026 by 0.2% (respectively to 1.4% and 1.2%). They maintained their headline inflation and unemployment projections for 2025.
- **The next meeting is set on March 19th. The question is whether a new cut will occur.**

ECB economic projections as of December 18 th 2025			
Indicator	2025	2026	2027
Change in real GDP	1.4	1.2	1.4
Unemployment rate	6.3	6.2	6.1
Inflation	2.1	1.9	1.8

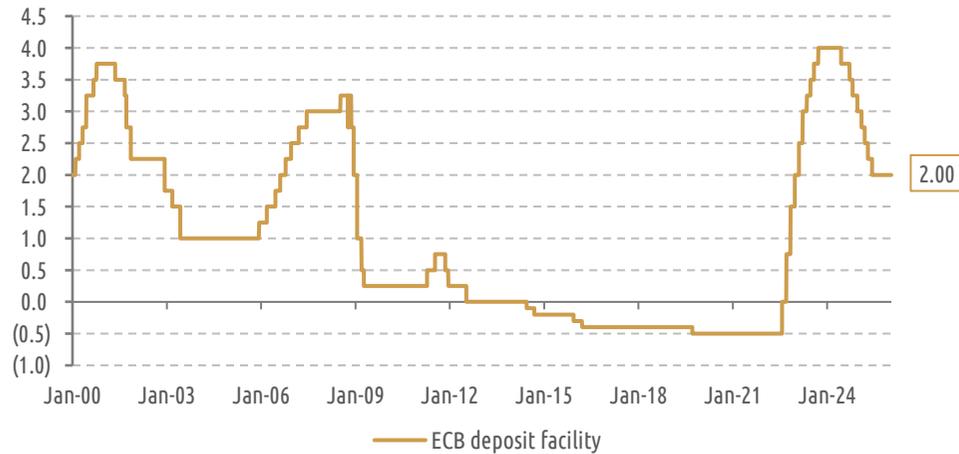

“The outlook for inflation continues to be more uncertain than usual on account of the volatile global policy environment.”

CHRISTINE LAGARDE, ECB PRESS CONFERENCE, FEBRUARY 5TH 2026

In the Eurozone, nominal rates have been slowly increasing in the last few months

Expected real rates, however, are near zero in the longer run while inflation expectations are very low on the short term.

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve has been positive for a year

It has strongly increased, getting close to its long-term average, as investors flee US uncertainty.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated following the results of the European elections, but it has been going up since Trump's inauguration

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

Due to political uncertainties, French yield on public debt is now higher than the one for Spain, Italy and Greece.

Italian, Greek, Spanish and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

On the contrary, for France, the spread with Germany increased after the results of the European and legislative elections in 2024 and has not returned to its 50bp medium-term value.

Italian, Greek, Spanish and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond have been on a falling trend since April

However, it has been increasing for the last month in the US

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

IV Impact on stock markets

US Stock market indices are at their highest levels ever.

Indices dropped following Trump's tariffs threats but they more than recovered their losses since May. They have, however, stagnated since October. European indices have fallen since the beginning of the military strikes on Iran.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index remains around its long-term level

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators are at pre-war levels

They increased with US tariffs' uncertainty but are now back to very low levels. The European index surged following the start of the military strikes on Iran.

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

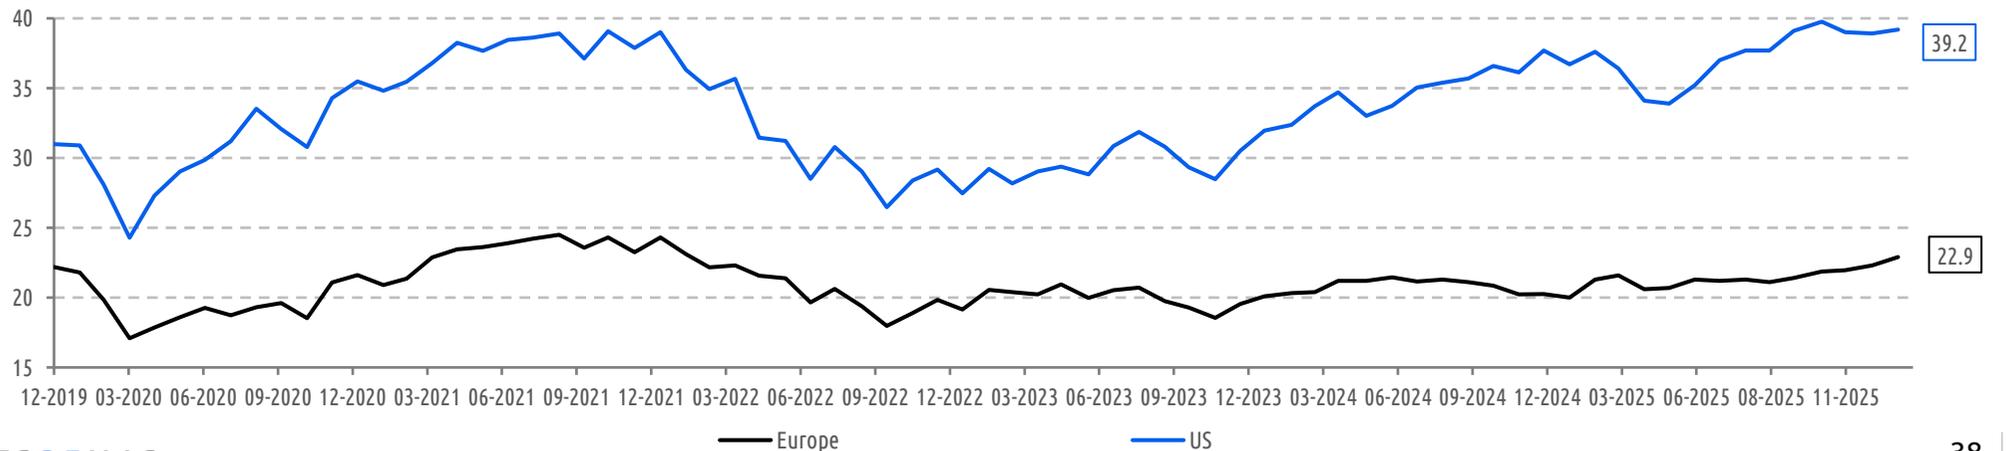

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
