Macroeconomic Outlook – April 2026

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP. The slides are updated each Friday
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are scrutinizing President Trump's decisions as the resulting political and economic uncertainties drive financial market volatility, influence governments' decisions, and affect inflation, global demand as well as labor market trends.
- Since Trump's inauguration and with the onset of the tariff war, some economic and financial indicators have weakened: the US dollar has depreciated and risk premiums have risen. With the (limited) tariff truce, other indicators as stock market indices have improved, but the uncertainty still hinders economic activity.
- The current Middle-East situation is closely followed by observers as it notably led to a surge of energy and raw-material prices and may influence negatively more macroeconomic and financial indicators if the situation does not improve rapidly.
- Headline inflation increased strongly in March as energy prices spiked following the strikes in Iran. Since 2024, a loosening of monetary policy has been happening. The ECB decreased its rates eight times by 25bp while the Fed cut its rates by 175 bp in total. If the situation in the Middle East remains difficult, central banks are expected to increase interest rates.
- GDP growth differences between the US and Europe remain large. However, because of the energy crisis, the trade war and the economic uncertainty they are causing, the OECD's growth projections for 2026 are lower than a year ago for all developed countries (they expect a 1.2% growth for the Euro Area versus a 1.7% growth for the US in 2026).
- Sovereign yields remain at a high level in the Euro Area despite their slow decrease over the past couple of years with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.

I Growth and inflation in selected G20 countries

A The growth slowdown

Forecasts of economic for 2026 and 2027 are lower than before

The OECD revised downwards its growth projections in March following the current events in the Middle East. However, the forecasted growth for the US remains higher than for other advanced economies

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2022	2023	2024	2025(P)	2026(P)	2027(P)

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa and Mexico have particularly low economic growth. The OECD forecasts in March remain similar to the previous ones despite the geopolitical uncertainty.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2022	2023	2024	2025(P)	2026(P)	2027(P)
China	3.0	5.2	5.0	5.0	4.4	4.3

Indonesia	1.3	1.2	1.2	1.2	1.2	1.3	1.3	1.3	-

Quarterly GDP (base 100 in 2019-Q4)

Government debts are at high levels in G4 countries¹

Governments need to decrease primary deficits to stabilize public debts. However, deficits remain quite large: from 2.8% in Germany to 6.7% in the US.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

Over the last few months, consumer confidence has been at low levels, especially for the US (following tariff uncertainty) and France (due to political uncertainty). It has decreased over the last two months for every country following geopolitical uncertainties.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

Prices of raw materials have mostly returned to their pre-war range

Oil and natural gas (only in Europe) prices spiked following the closing of the Strait of Hormuz. Wheat prices have strongly decreased since the beginning of the Russian invasion to reach their pre-COVID level while copper prices are particularly high as supply has been lower than expected.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

Supply-chain disruptions occurred in 2024 and at the beginning of 2025

However, transportation costs have strongly decreased and are now around their long-time average.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

Shipping Container Index (based on spot rate for 40 feet containers)

Both vacancies and unemployment rates are at particularly low levels

Beveridge curve - USA, Monthly

Unemployment rate (% of labor force) - Monthly

Rate	3.6	3.7	3.7	3.7	3.8	3.8	3.8	3.9	3.9	4.0	4.0	4.0

Wage inflation has been on a downward trend

However, it remains at a high level in the US.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

C Inflation stabilization

Headline Inflation spiked in March

The increase is due to the events in the Middle East that strongly increased energy prices. Headline inflation is now higher than core inflation. Core inflation has been slowly decreasing but remains higher than 2% in most countries.

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2025/2026											
Country	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
US	2.4	2.7	2.7	2.9	3.0	-	2.7	2.7	2.4	2.4	3.3

CPI Inflation (YoY % change) – since Jan 2021

Inflation has been decreasing in most emerging economies

Inflation has been particularly low in China following strong economic and geopolitical uncertainties.

CPI inflation in emerging economies (YoY % change)

Monthly Year-on-Year inflation rates (%)												
Country	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
China	(0.1)	(0.1)	0.1	0.0	(0.4)	(0.3)	0.2	0.7	0.8	0.2	1.3	1.0
India	2.9	2.9	2.6	2.7	3.2	2.8	2.2	2.6	3.1	3.8	4.0	-
South Africa	2.8	2.8	3.0	3.5	3.3	3.4	3.6	3.5	3.6	3.5	3.0	3.1
Brazil	5.5	5.3	5.4	5.2	5.1	5.2	4.7	4.5	4.3	4.4	3.8	4.1
Mexico	3.9	4.4	4.3	3.5	3.6	3.8	3.6	3.8	3.7	3.8	4.0	4.6
Indonesia	2.0	1.6	1.9	2.4	2.3	2.7	2.9	2.7	2.9	3.6	4.8	3.5

CPI Inflation (YoY % change) – since Jan 2021

Implied GDP deflators have strongly decreased over the last couple of years

It is particularly low in France.

Quarterly implied GDP deflator

Implied GDP deflator (YoY % change)								
Country	Q1-24	Q2-24	Q3-24	Q4-24	Q1-25	Q2-25	Q3-25	Q4-25
USA	2.4	2.6	2.3	2.4	2.6	2.5	3.0	3.3
Germany	3.8	3.4	2.8	2.4	2.5	3.0	3.1	3.2
France	3.1	1.7	2.2	1.4	1.2	1.6	0.9	1.0
UK	3.7	3.2	3.9	4.9	4.2	4.1	3.5	3.1

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

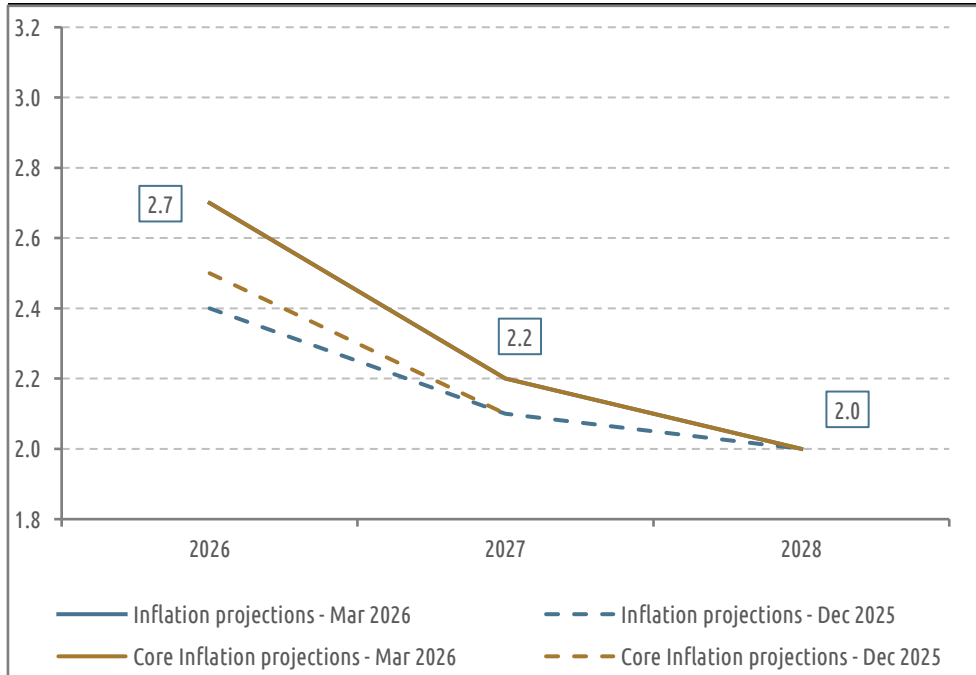

The Fed maintained its interest rates in March

The Fed consider that the US economy grew at a solid pace over the past year while the labor market has been stabilizing notably thanks to their previous rate cuts. Besides, they consider that they need to wait and see the impact of current Middle East events and geopolitical uncertainty before deciding a new course of actions.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	07-25	08-25	09-25	10-25	11-25	12-25	01-26
PCE inflation	2.6	2.7	2.8	2.7	2.8	2.9	2.8

PCE Inflation Projections as of March 2026 (%)

Key considerations

- **The target range of the federal fund rates was maintained at 3.50%-3.75% on March 18th.**
- The decision was expected by most investors. It follows three cuts in September, October and December after several months without interest changes. In 2024 the rate was at its highest since 2001.
- The Fed raised its 2026 inflation projection by 0.3 percentage points following events in the Middle East, while slightly increasing its GDP forecast by 0.1 percentage points.
- **Next meeting will be on April 29th. The decision will probably depend on the strength and duration of the energy crisis in the Middle East.**

Federal Reserve economic projections as of March 18th 2026

Indicator	2026	2027	2028
Change in real GDP	2.4	2.3	2.1
Unemployment rate	4.4	4.3	4.2
PCE Inflation	2.7	2.2	2.0
Federal funds rate	3.4	3.1	3.1

“But the implications of events in the Middle East for the U.S. economy are uncertain. In the near term, higher energy prices will push up overall inflation, but it is too soon to know the scope and duration of the potential effects on the economy.”

JEROME POWELL, PRESS CONFERENCE, MARCH 18TH, 2026

Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In March, Fed members have forecasted interest rates similar to those in September. It notably implies that Fed members consider that one 25bps cuts is likely to occur in 2026.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 18th March

Nominal long-term rates are at high levels, slowly decreasing

Real rate however are expected to stay around 2% in real terms.

Federal funds interest rate

Inflation Expectations – US (%)

10-Y Nominal yield – US

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve has been positive for the past year

This usually indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

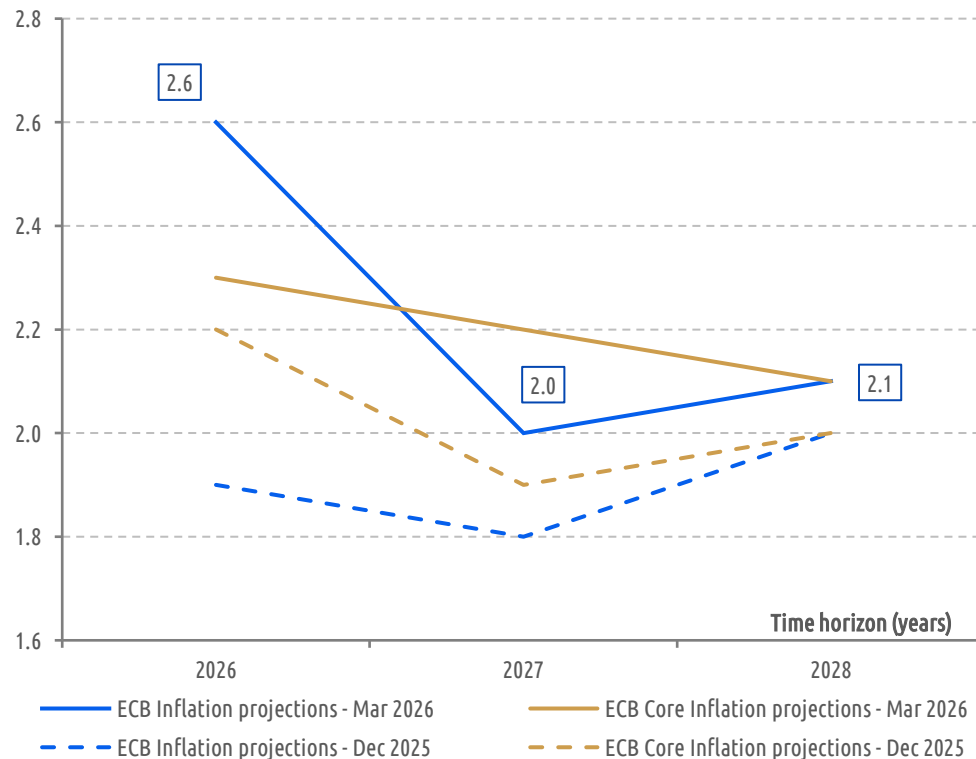

B In the Euro Area

The ECB kept its rates unchanged at 2% in March

President Lagarde explained that ECB actions over the last few months have brought inflation down. They are monitoring the current uncertain environment that may raise inflation in the coming weeks and will respond when needed.

Inflation expectations & projections as of March 19th 2026 (%)

Key considerations

- **The target of the ECB rates was maintained at 2.00% on March 19th.**
- The Governing Council decision comes after eight 25bp cuts since June 2024. Interest rates were previously at their highest level since the creation of the ECB.
- The ECB staff decreased their GDP projections for 2026 by 0.3pp while increasing their inflation projections by 0.7pp following trade and energy supply uncertainties.
- **The next meeting is set on April 30th. The decision will depend on the duration of the energy crisis following event in the Middle East.**

ECB economic projections as of March 19 th 2026			
Indicator	2026	2027	2028
Change in real GDP	0.9	1.3	1.4
Unemployment rate	6.3	6.2	6.1
Inflation	2.6	2.0	2.1

“The war in the Middle East has made the outlook significantly more uncertain, creating upside risks for inflation and downside risks for economic growth. It will have a material impact on near-term inflation through higher energy prices. Its medium-term implications will depend both on the intensity and duration of the conflict and on how energy prices affect consumer prices and the economy.”

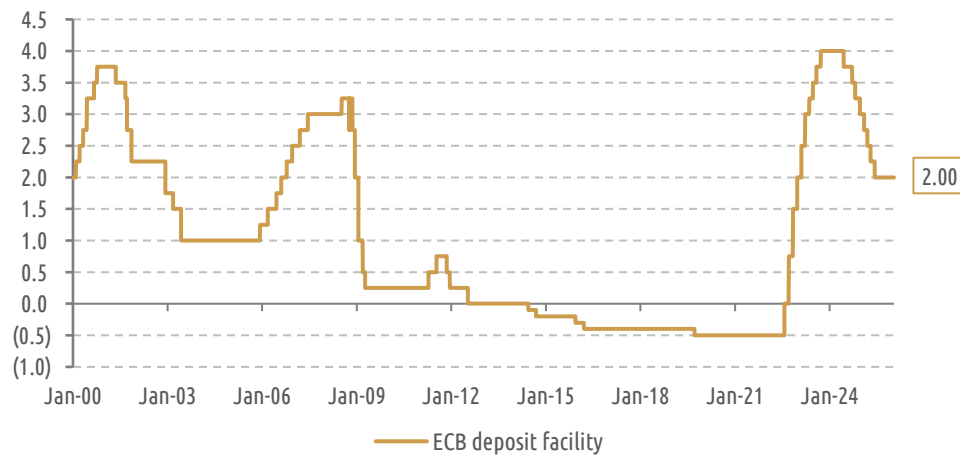

Source: ECB

CHRISTINE LAGARDE, ECB PRESS CONFERENCE, MARCH 19TH 2026

In the Eurozone, nominal rates have been slowly increasing in the last few months

Expected real rates, however, are near zero in the longer run while inflation expectations have strongly increased in the short-term following the military strikes in Iran and the closing of the strait of Hormuz.

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve has been positive for a year

It has, however, been decreasing since the military strikes in Iran.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated following the results of the European elections, but it has been going up since Trump's inauguration

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

— USD/EUR

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

Due to political uncertainties, French yield on public debt is now higher than the one for Spain, Italy and Greece.

Italian, Greek, Spanish and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

On the contrary, for France, the spread with Germany increased after the results of the European and legislative elections in 2024 and has not returned to its 50bp medium-term value.

Italian, Greek, Spanish and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond have been on a falling trend since April 2025

Despite a short-term spike following the military strikes in Iran, it is at a very low level.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

IV Impact on stock markets

Stock market indices dropped with the military strike in Iran

They have, however, recovered their losses over the last couple of weeks. US indices are even at their highest levels ever.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index remains around its long-term level

It had increased following the military conflict in Iran, but came back to more usual levels over the last few weeks.

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators are at pre-war levels

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
