Macroeconomic Outlook – June 2026

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP. The slides are updated each Friday
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are scrutinizing President Trump's decisions as the resulting political and economic uncertainties drive financial market volatility, influence governments' decisions, and affect inflation, global demand as well as labor market trends.
- Since Trump's inauguration and with the onset of the tariff war, some economic and financial indicators have weakened: the US dollar has depreciated and risk premiums have risen. With the (limited) tariff truce, other indicators as stock market indices have improved, but the uncertainty still hinders economic activity.
- The current Middle-East situation is closely followed by observers as it notably led to a surge of energy and raw-material prices and may influence negatively more macroeconomic and financial indicators if the situation does not improve rapidly.
- Headline inflation have strongly increased since March as energy prices spiked following the strikes in Iran. Consequently, the ECB started to increase its interest rates. The Fed, however, maintained their rate for the moment.
- GDP growth differences between the US and Europe remain large. However, because of the energy crisis, the trade war and the economic uncertainty they are causing, the OECD's growth projections for 2026 are lower than a year ago for all developed countries (they expect a 1.2% growth for the Euro Area versus a 1.7% growth for the US in 2026).
- Sovereign yields remain at a high level in the Euro Area despite their slow decrease over the past couple of years with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.

I Growth and inflation in selected G20 countries

A The growth slowdown

Forecasts of economic for 2026 and 2027 are lower than before

The OECD revised downwards its growth projections in March following the current events in the Middle East. However, the forecasted growth for the US remains higher than for other advanced economies. Growth was particularly low in Europe for the first quarter of 2026.

Yearly GDP growth rate (YoY % change)

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa and Mexico have particularly low economic growth. The OECD forecasts in March remain similar to the previous ones despite the geopolitical uncertainty.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2022	2023	2024	2025(P)	2026(P)	2027(P)

Indonesia	1.3	1.2	1.2	1.2	1.2	1.3	1.3	1.3	1.4

Quarterly GDP (base 100 in 2019-Q4)

Government debts are at high levels in G4 countries¹

Governments need to decrease primary deficits to stabilize public debts. However, deficits remain quite large for the different countries. It is notably exploding for the US following the war in Iran.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

Over the last few months, consumer confidence has decreased for every country following geopolitical uncertainties.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

Prices of most raw materials are at particularly high levels

Oil and natural gas (only in Europe) prices spiked following the closing of the Strait of Hormuz. Copper prices are particularly high as supply has been lower than expected. However, wheat prices remain close to their long-term level.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

Supply-chain disruptions occurred in 2024 and at the beginning of 2025

Shortages and transportations costs have started to increase as the current tensions in the Middle East are lasting.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

Shipping Container Index (based on spot rate for 40 feet containers)

Both vacancies and unemployment rates are at particularly low levels

Beveridge curve - USA, Monthly

Wage inflation has been on a downward trend

It, however, remains at a pretty high level.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

C Inflation stabilization

Headline Inflation has spiked since March

The increase is due to the events in the Middle East that strongly increased energy prices. Headline inflation is now higher than core inflation. Core inflation remains stable but higher than 2% for most countries.

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%)											
Country	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May
US	2.7	2.9	3.0	-	2.7	2.7	2.4	2.4	3.3	3.8	4.2

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

The Fed maintained its interest rates in June

The Fed consider that the US economy grew at a solid pace over the past year while the labor market has been stabilizing. Besides, they believe that inflation coming from the war in the Middle East should be temporary and does not require yet a raise of interest rates.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	10-25	11-25	12-25	01-26	02-26	03-26	04-26
PCE inflation	2.7	2.8	2.9	2.9	2.9	3.5	3.8

PCE Inflation Projections as of June 2026 (%)

Key considerations

- For the first meeting with Kevin Warsh as Chairman, the target range of the federal fund rates was maintained at 3.50%-3.75% on June 17th.
- The decision was expected by most investors. It follows three cuts in September, October and December after several months without interest changes. In 2024 the rate was at its highest since 2001.
- The Fed increased its 2026 inflation projection by 0.9 percentage points while decreasing its GDP forecast by 0.2 percentage points. following events in the Middle East.
- Next meeting will be on July 29th. The decision will probably depend on the strength and duration of the energy crisis in the Middle East.

Federal Reserve economic projections as of June 17 th 2026			
Indicator	2026	2027	2028
Change in real GDP	2.2	2.3	2.2
Unemployment rate	4.3	4.3	4.2
PCE Inflation	3.6	2.3	2.0
Federal funds rate	3.8	3.1	3.1

“Inflation remains elevated relative to the Committee’s 2 percent goal, in part reflecting supply shocks that have driven price increases in certain sectors, including energy. The Committee will deliver price stability..”

KEVIN WALSH, PRESS CONFERENCE, JUNE 17TH, 2026

Monetary policy decisions from the Fed (2/2)

The Federal Reserve's so-called dot plot shows the median year-end projection for the federal fund rates. In June, Fed members have forecasted interest rates higher than in March by about 50bps. It notably implies that Fed members consider that one 25bps raise is likely to occur in 2026.

FOMC participants' assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 17th June

Nominal long-term rates are at high levels

Real rates however are expected to stay around 2% in real terms.

Federal funds interest rate

Inflation Expectations – US (%)

10-Y Nominal yield – US

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve has been positive for the past year

This usually indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

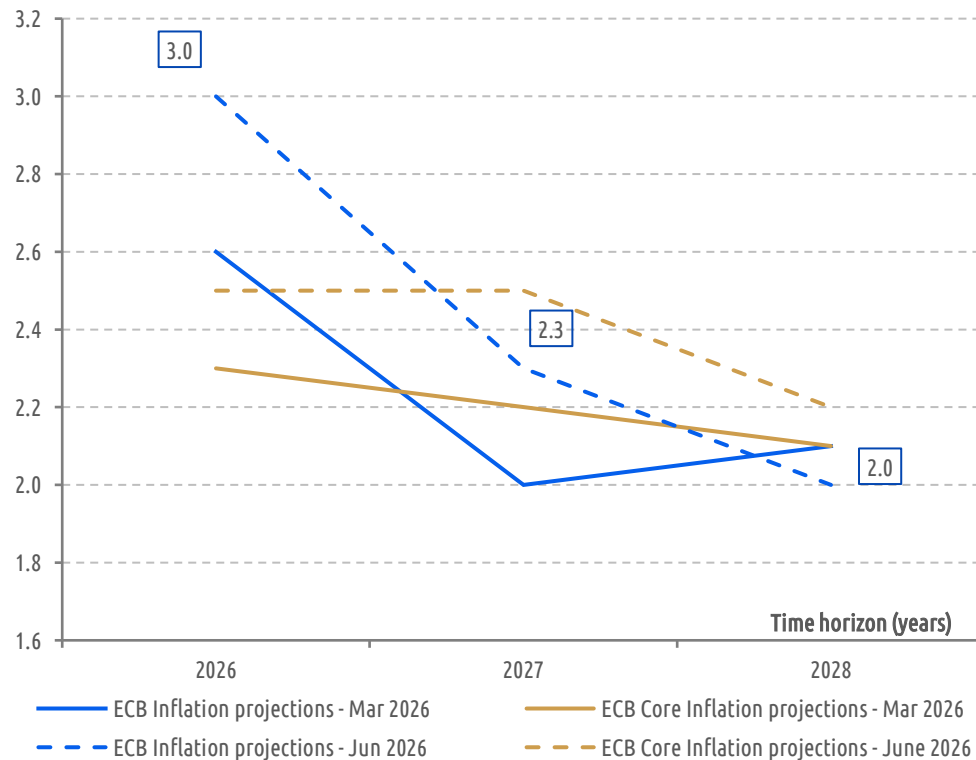

B In the Euro Area

The ECB raised its rates at 2.25% in June

President Lagarde explained that the war in the Middle East is generating too much inflationary pressures. Despite decreasing again their growth projections, the ECB fears this inflation in energy goods will feed into other goods and services.

Inflation expectations & projections as of June 11th 2026 (%)

Key considerations

- **The target of the ECB rates was raised from 2.00% to 2.25% on June 11th.**
- It is the first time the ECB raises its interest rates since September 2023 when it was at its highest level ever (4.00%), again due to strong energy inflation.
- The ECB staff decreased their GDP projections for 2026 by 0.1pp (from 0.9 to 0.8) while increasing their inflation projections by 0.4pp (from 2.6% to 3.0%).
- **The next meeting is set on July 27th. The decision will depend on the duration of the energy crisis.**

ECB economic projections as of June 11 th 2026			
Indicator	2026	2027	2028
Change in real GDP	0.8	1.2	1.5
Unemployment rate	6.3	6.3	6.2
Inflation	3.0	2.3	2.0

The longer energy prices stay high, the more likely they are to drive up broader inflation through indirect and second-round effects. We will therefore closely monitor the size and persistence of the energy price increase, and how it feeds through to price and wage-setting, inflation expectations and overall economic dynamics.

In the Eurozone, nominal rates have been slowly increasing in the last couple of years

Expected real rates, however, are near zero in the longer run.

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve has been positive for more than a year

It has, however, been decreasing since the military strikes in Iran.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated following the results of the European elections, but it has been going up since Trump's inauguration

It has been rather stable in the last year.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

USD/EUR

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

Due to political uncertainties, French yield on public debt is now close to the level of the one of Italy and Greece.

Italian, Greek, Spanish and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

On the contrary, for France, the spread with Germany increased after the results of the European and legislative elections in 2024 and has not returned to its 50bp medium-term value.

Italian, Greek, Spanish and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond spreads have been on a falling trend for more than a year

Despite a short-term spike following the military strikes in Iran, they are at a very low level.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

IV Impact on stock markets

US indices are at their highest levels ever

Despite falling following the military strike in Iran. Large technological companies have been particularly favored by investors

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index remains around its long-term level

It had increased following the military conflict in Iran, but came back to more usual levels over the last few weeks.

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators are at pre-war levels

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
